

Magna Pop Set-Up Instructions

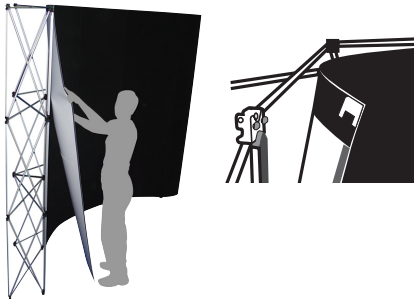

Open case and remove frame and magnetic channel bars.

Pull frame open until magnetic locking connectors engage.

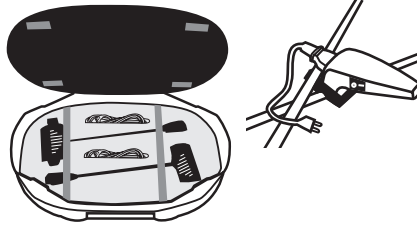

Snap channel bars into vertical columns across the front and two rear edges of the frame.

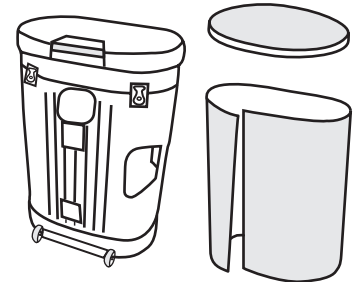

Hang panels beginning from center of frame by hooking small adapter on top rear of panels to hanging pegs at the top of the frame. Align magnetic tape on rear of panels to the magnetic channel bars.

End panels have black plastic strips only on the top rear corners of the panel.

Install lights located inside the case lid by sliding the base of the light adapter into the "X" created by the top horizontal cross bars of the frame.

If applicable, convert your case to a counter by wrapping the podium wrap around the outside of the case and applying the Velcro. The plastic oval or the optional hardwood oval can be used to cover the top of the case.

PACKING NOTES:

1. Before collapsing the frame, ensure that all channel bars and lights have been removed from the frame.
2. Roll **fabric panels** two at a time with fabric-to-fabric and place the panels in the case.
3. Roll **graphic panels** one at a time with the **graphics facing outwards** and place the panels in the case.
4. Once cool, pack lights in the light compartment in the lid.
